

more bubbles less bacteria

Water tank - 5L

Chlorine removal filtration

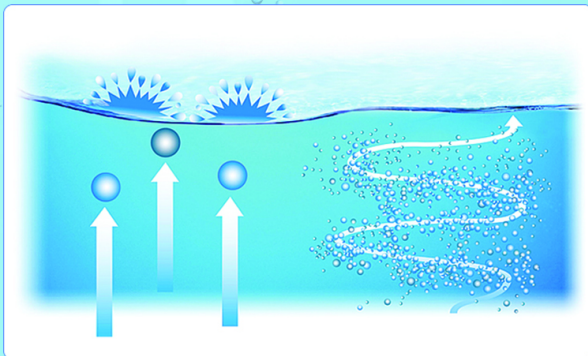

Build in ozone generator and

Air pump

Ozone gas destruction unit

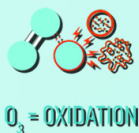

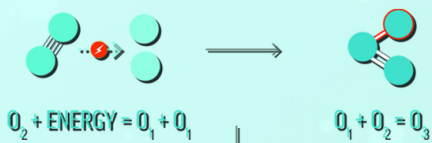

Contain more than 10 Billion nano bubbles per 1L of water.

As the particle size is reduced, the surface area-to-volume ratio increases. Such increase promotes improved oxygenation efficiency and provides a better water sterilization.

The buoyancy of nano bubbles will rise to the surface of aqueous solutions much more slowly and not easily collapse. They can remain stable in water for extended period of time.

☑ 1 : 1 2 0

The oxygenated and ozonated water will kill all bacteria naturally without using any chemicals.

Daily usage

Aquaculture

Sanitation

Medicine
